

Auditable Flourishing v6.2 Validation Status

Exact evidence boundary for the frozen master specification and publication-integrity closure.

AF v6.2 | 13 August 2026 | 2026-08-13T16:45:26Z

Status by axis

Axis	Status	Boundary
Artifact integrity	Verified for exact hash-pinned package	Does not establish substantive validity.
Conceptual maturity	Internally specification-complete and frozen	Independent evidence may still require revision, restriction, or retirement.
Constitutional legitimacy	CL1 self-assessment; CL2 design materials only	No independent convention has established plural legitimacy.
Instrument maturity	Hardened, version-bound, and hostile-tested	External reliability, fairness, and field usability remain unestablished.
Implementation readiness	Phase 0 design-ready	Independent host, reviewer pool, and frozen calibrated case library are not yet constituted.
Empirical validation	Not established	Reliability, validity, burden, capture resistance, and decision value require external evidence.
Domain authorization	Not granted	No AF finding grants legal, moral, community, procurement, safety, or deployment authority.

Permitted present uses

- Scholarly publication and repository deposit
- Public adversarial review
- Reviewer training and synthetic replay
- Construction and preregistration of an independently hosted Phase 0 study

Prohibited present claims

- Empirically validated
- Universally legitimate
- Legally compliant
- Morally or ethically certified

- Evidence of due diligence, foreseeability, immunity or reasonable care
- Procurement or deployment authorization

Publication-integrity and provenance closure

The v6.2 package retains one controlling AF-SB12 definition, one Stage A precedence, synchronized DOCX/Markdown/PDF triplets, current release bindings, ISO-8601 illustrative timestamps, and a workbook that preserves established material defects under mixed-state uncertainty. It adds a canonical registry, artifact-authority policy, dated external-fact verification record, deduplicated provenance, and portable root verification.

This closure does not establish inter-reviewer reliability, construct validity, architecture fairness, decision value, live-use safety, plural constitutional legitimacy, legal conformity, community consent, or deployment authority.

AF v6.2 synchronization note

This artifact implements the v6.2 three-axis record (decision_status, evidence_state, review_state), the non-erasure invariant, perturbation-replay anti-inflation and anti-suppression controls, and the separation of raw agreement, reliability, adjudication, and external validity. These controls clarify the existing protocol and do not confer legal, moral, procurement, or deployment authority.
